

February 27, 1986 LB 474

They've got to use, and I hope nobody uses the word abuse the land, but they've got to use it right to its total capacity in order to try to get enough funds to at least hang on to it. Now I hope we don't start anything...

SPEAKER NICHOL: Time.

SENATOR VICKERS: ...that would disrupt that for any landowner out there. Thank you, Mr. President.

SPEAKER NICHOL: Senator Hannibal, then Senator Rod Johnson, then Senator Hoagland. Senator Hannibal.

SENATOR HANNIBAL: Mr. Speaker, I wasn't going to address the bill at this point because I thought we had our concerns worked out and we weren't going to have to spend much time on the floor on this thing, and I think it is necessary for me now to, because my name has been mentioned so many times, to explain to you some of our concerns with regard to the construction part or the non-ag part of this bill. I think, given time, given the opportunity to speak, I think you could see our side of it very, very readily, and so I thought I'd just be able to do that on Select File. But I think it is important that you understand that we are not being parochial, and when I say we I'm talking about construction industry people because I am a builder, and I am involved in development, and we are in a non-ag area. This bill does two things. It deals with changes in land use and land development, agricultural and nonagricultural, and its goal is very, very laudable. The goal says we want to have good soil conservation, and I don't disagree with that a bit. But the bill says that when we ask you to make some changes to your land, NRDs saying that, that we are going to put up 75 percent of the cost, now 90 percent of the cost, and you only have to put up 10 percent of the cost. That is true for permanent changes, and that is basically what is involved in agriculture. When they tell you to do different things about your...restructure your land, terrace, do whatever you're going to do with things, and I'm not in agriculture so forgive my ignorance, but that is permanent. But there is also provision in this bill that says for temporary things, to do things immediately, and to stop runoff, to stop sediment problems, to stop soil erosion on a temporary, quick notice basis, the bill gives you some pretty good time lines for the agriculture area, like a year or so, plus they are going to pay 90 percent of it. But for
