

one, western Nebraska, you raise from the very beginning the livestock, the cow-calf man, the ranches. Phase number two, here in Nebraska you take that calf, you put it in a feed yard. Phase number three, in the feed yard, thousands, tens of thousands of farmers who produce corn all over Nebraska put their corn, their raw material into that cow, steer. And phase number four, somebody comes along and buys that creature and takes it to a slaughtering plant here in Nebraska, and when that animal is slaughtered, it is put into a box all cut up into steaks and delivered to some table in New York. You talk about food processing, everybody has been babbling and chattering about how we have got to develop food processing, you have the single biggest complete A to Z red meat factory in the world and it is all one integrated piece in Nebraska. Now how does Initiative 300 affect it. Start with step number one, cow-calf man, Senator Harris can tell you. He and his brothers are violating the law right now as are all kinds of Nebraskans because they are involved in placing "limited partnership" or other livestock owned out there on the range, leased, so on and so forth. No, it is not being enforced but Marty Strange and others will enforce it eventually, and all it needs is one good strict enforcement to begin wiping out that segment of the industry. Step number two, the feeder, Minatare Feedlot, page after page after page just obtained from the Attorney General and the Secretary of State of the State of Nebraska. If you want to come read it, read it. They are good people. The best feeders in the state probably or among the best. They also do commercial feeding, just like all of the other feedlots of any size in this state. When you start enforcing that, you wipe out phase number two of the factory. Now when you wipe out phase number two of the factory, what do you also knock out? You wipe the blazes out of phase number three which is the corn, grain producer. Quit living in the world of the past. The buffalo are gone to quote a friend of mine. The world of the past is you had unlimited markets overseas, and it didn't matter how much you raised, somebody was going to buy it over there. Well, they are not buying as much anymore because they are producing their own. They have become self-sufficient. If you don't use your own products here and process them here, you are eventually going to be sitting with a whole bunch of them with nothing to do with.

PRESIDENT: One minute.
