

dollars are going to be used for the support dollars to operate that clinical facility?

SENATOR WARNER: No. Under the federal conditions the funds are limited to equipment and structure and facilities. They cannot be used for operating money of any kind.

SENATOR VICKERS: Well that's the reason I'm asking because on the committee amendment on lines 15 through 19 on, must be about page 2, I guess it would be, for informational purposes the total project cost of \$14 million includes a maximum of \$3 million to be used for the service and support and clinical training facility. So in other words, that's only a definition of the services provided, not a definition of what the dollars are going to be used for. In other words, we have to come up with the money somewhere else to provide the support as far as, in terms of personnel or those kinds of things.

SENATOR WARNER: The reference is not to personnel. Support...I'm trying to find the exact wording you're referring to here, but I...support might in this case refer to equipment as supportive, but it does not mean personnel or operating cost.

SENATOR VICKERS: Okay, thank you, Senator Warner. I'm going to support the committee amendment. I just want to make clear for the record and I will speak to the bill later on that after this becomes the committee amendment, that we are committing ourselves, I believe, to more than just capital construction. The monies are for capital construction admittedly, but I think we'd ought to all recognize that building a building, called putting a nice name on it, saying it's for food processing or it's for clinical support of veterinary training which I support and which, by the way, was my idea a long time ago. When I hear people say about how wonderful it is that we have these monies available for this food processing center, maybe you'd all ought to come up to me and thank me for having those monies or they would have been spent a long time ago on a marble mausoleum over here at the university. But the point I want to make is, it's going to take money to operate these in the future and this Legislature had better recognize...

SPEAKER NICHOL: One minute.
